#The "Total Firm Assets" column includes unified managed account (UMA) assets

Congress Asset Management claims compliance with the Global Investment Performance Standards (GIPS[®]) and has prepared and presented this report in compliance with the GIPS standards. Congress Asset Management has been independently verified for the periods 1/1/96 – 12/31/24. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Large Cap Growth Composite has had a performance examination for the periods 1/1/96 – 12/31/24. The verification and performance examination reports are available upon request.

Firm Information: Congress Asset Management Co. (CAM) is an investment advisor registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Registration does not imply a certain level of skill or training. CAM manages a variety of public equity, private equity, fixed income, and ETF managed portfolios for private and institutional clients. CAM acquired Prelude Asset Management, LLC on March 15, 2010. CAM merged with Congress Capital Partners, LLP on June 30, 2015. CAM acquired certain strategies of Century Capital Management, LLC on September 15, 2017.

Composite Characteristics: The Large Cap Growth Composite was created on January 1, 1993, and the inception date of the composite is January 1, 1985, which reflects the first full month in which an account was fully invested in the strategy and met the inclusion criteria. The composite includes all fully discretionary portfolios with a value over \$100 thousand (US dollars) managed in the large cap growth style for a minimum of one full month. The large cap growth strategy invests in the equity of high-quality companies with market capitalizations greater than \$5 billion exhibiting consistent earnings growth. The strategy may also invest from time to time in equity securities with capitalizations between \$1 billion and \$5 billion. Accounts with wrap commissions are excluded from the composite. Prior to January 1, 2016, the composite minimum was \$500 thousand (US dollars). Prior to September 1, 2005, the composite did not include taxable accounts, private client accounts, or accounts with less than \$1 million. The primary composite benchmark is the S&P 500 Index. The secondary benchmark is the Russell 1000 Growth Index. The benchmark returns are not covered by the report of independent verifiers. Closed account data is included in the composite as mandated by the standards in order to eliminate a survivorship bias. A list of composite descriptions, a list of broad distribution pooled funds, and a list of limited distribution pooled fund descriptions are available upon request.

Calculation Methodology: Valuations and returns are computed and stated in U.S. dollars. Gross of fees returns are calculated gross of management and custodial fees and net of transaction costs. Net of fees performance reflects the deduction of a maximum annual model delivery fee of 3%, or 0.25% monthly. The composite results portrayed reflect the reinvestment of dividends, capital gains, and other earnings when appropriate. Accruals for equity securities are included in calculations. Internal dispersion is calculated using the asset-weighted standard deviation of annual gross-of-fees returns of those portfolios that were included in the composite for the entire year. For those years when less than six portfolios were included in the composite for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. Prior to January 1, 1993, the composite is not in compliance with GIPS.

Other Disclosures: Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Past performance does not guarantee future results. This performance report should not be construed as a recommendation to purchase or sell any particular securities held in composite accounts. Market conditions can vary widely over time and can result in a loss of portfolio value. GIPS[®] is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Important Disclosures

The materials are being provided for illustrative and informational use only. Performance returns of less than one year are not annualized. Prior performance results are based on accounts that do not participate in a model delivery program with investment and operational differences such as account size and/or level of customization. There may be other reasons why the performance results differ from those of an individual account managed in the same or a substantially similar investment strategy. For example, individual accounts may differ from the strategy when applying client-requested restrictions.

There is no guarantee that the model portfolio will continue to hold any particular security and securities are held in varying percentages. Holdings are subject to change since the portfolio is actively managed. Holdings are intended to illustrate the composition and characteristics. Across client portfolios, there may be variations in holdings, characteristics and performance information as dictated by reasons such as diversification needs, specific client guidelines, account size, cash flows, the timing and terms of execution of trades, and differing tax situations.

This strategy involves risk, may not be profitable, may not achieve its objective, and may not be suitable or appropriate for all investors. Investors should consider the investment objectives, risks, and fees of this strategy carefully with their financial professional before investing. Principal loss is possible. Past strategy returns are dependent on the market and economic conditions that existed during the period. Future market or economic conditions can adversely affect the returns. **Past performance does not guarantee future results.**

Not an Offer, Recommendation or Professional Advice: This document does not constitute advice or a recommendation or offer to sell or a solicitation to deal in any security or financial product. It is provided for information purposes only and on the understanding that the recipient has sufficient knowledge and experience to be able to understand and make their own evaluation of the proposals and services described herein, any risks associated therewith and any related legal, tax, accounting or other material considerations. To the extent that the reader has any questions regarding the applicability of any specific issue discussed above to their specific portfolio or situation, prospective investors are encouraged to contact Congress Asset Management or consult with the professional advisor of their choosing.

Forward-Looking Statements: Certain information contained herein constitutes "forward-looking statements," which can be identified by the use of forward-looking terminology such as "may," "will," "should," "expect," "anticipate," "project," "estimate," "intend," "continue," or "believe," or the negatives thereof or other variations thereon or comparable terminology. Due to various risks and uncertainties, actual events, results or actual performance may differ materially from those reflected or contemplated in such forward-looking statements. Nothing contained herein may be relied upon as a guarantee, promise, assurance or a representation as to the future

Large Companies Risk: The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

Mid-Capitalization Investing Risk: The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole.

Growth Style Investment Risk: Growth stocks may lose value or fall out of favor with investors. Growth stocks may be more sensitive to changes in current or expected earnings than the prices of other stocks.

Equity Securities Risk: Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value. These fluctuations may cause a security to be worth less than its cost when originally purchased or less than it was worth at an earlier time.

Foreign Investment Risk: Foreign securities involve increased risks due to political, social and economic developments abroad, as well as due to differences between U.S. and foreign regulatory practices. When the Strategy invests in ADRs as a substitute for an investment directly in the underlying foreign shares, the Strategy is exposed to the risk that the ADRs may not provide a return that corresponds precisely with that of the underlying foreign shares.

Sector-Focus Risk: Investing a significant portion of the Strategy's assets in one sector of the market exposes the Strategy to greater market risk and potential monetary losses than if those assets were spread among various sectors.

Information Technology Sector Risk: The information technology sector can be significantly affected by rapid obsolescence of existing technology, short product cycles, falling prices and profits, competition from new market entrants, government regulation, and general economic conditions.

General Market Risk: Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Strategy's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market, or other asset classes due to a number of factors, including: inflation (or expectations for inflation); deflation (or expectations for deflation); interest rates; global demand for particular products or resources; natural disasters or events; pandemic diseases; terrorism; regulatory events; other governmental trade or market control programs and related geopolitical events. In addition, the value of the Strategy's investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics.

Management Risk: The Strategy is actively-managed and may not meet its investment objective based on the Advisor's success or failure to implement investment strategies for the Strategy.

Definitions:

The Russell 1000 Growth Index measures the performance of the Large cap growth segment of the US equity universe. It includes those Russell 1000 companies with higher price-to-value ratios and higher forecasted growth values. Indices are unmanaged. It is impossible to invest directly in an index. The performance of an index does not reflect any transaction costs, management fees, or taxes. **S&P 500 Index** is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks. Indices are unmanaged. It is impossible to invest directly in an index. The performance of an index does not reflect any transaction costs, management fees, or taxes. **P/E Ratio** is the ratio of a company's share price to the company's earnings per share. **Market Capitalization** measures the number of outstanding common shares of a given corporation multiplied by the latest price per share. Yield is determined by dividing a stock's annual dividends per share by the current market price per share. **Dividend yield** is a financial ratio that shows how much a company pays out in dividends. **Standard Deviation** is a measure of the dispersion of a set of data from its mean. It is used by investors as a gauge for the amount of expected volatility. **Sharpe Ratio** is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the portfolio's historical adjusted performance. **Alpha** is a measure of the difference between actual returns and expected performance, given the level of risk as measured by Beta, where Beta measures sensitivity to benchmark movements. **Beta** is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the entire market or a benchmark. **Upside Capture Ratio** measures the manager's overall performance to the benchmark's overall performance, considering only months that are positive in the benchmark. An **Upside Capture Ratio** of more than 100% indicates a manager who outperforms the relative benchmark in the benchmark's positive months. **Downside Capture ratio** is the ratio of the manager's overall performance to the benchmark's overall performance, considering only months that are negative in the benchmark. A **Downside Capture Ratio** of less than 100% indicates a manager who outperforms the relative benchmark in the benchmark's negative months and protects more of a portfolio's value during down markets.
